

Maple Tree Primary School

Year 4- Why are rainforests important to us?

Map of the world's biomes

biome

An area of the world with a similar climate and landscape, where similar plants and animals live.

-  Tundra
-  Temperate deciduous forest
-  Tropical rainforest
-  Savannah
-  Desert
-  Boreal forest

Tropic of Cancer

Equator

Tropic of Capricorn

A line of latitude north of the Equator which marks the northernmost edge of the Earth's hottest regions.

An invisible horizontal line that splits the world into two hemispheres.

A line of latitude south of the Equator which marks the southernmost edge of the Earth's hottest regions.

Tropical rainforest

How have plants adapted in the Amazon rainforest?

Thin, smooth bark ensures rain can run off trees easily.

Buttress roots keep tall trees stable in the wet soil and strong winds.

Drip tips mean rain can run off leaves without damaging them.

Lianas (vines) wind their way up other plants to reach sunlight.

Layers of the rainforest

emergent
layer

canopy
layer

understory
layer

forest
floor

global warming

When our Earth's temperature rises because of greenhouse gases.

mining

The process of digging underground for precious metals and stones.

logging

The cutting down of trees for their wood.

deforestation

The cutting down of trees in a large area.

emergent layer

The top layer of the rainforest with the tallest trees that get lots of sunlight, rain and wind.

canopy layer

The layer of overlapping branches and leaves below the top of the rainforest that gets sunlight, rain and wind.

understory layer

The warm and damp layer above the forest floor that gets little light.

forest floor

The ground layer of the rainforest where it is dark, wet and hot.
